

PayWithIt® POS

Secure mobile payments at your fingertips

PayWithIt® POS secure mobile payment acceptance app is ideal for merchants who would like to accept credit cards, signature debit transactions on the go.

From the convenience of a mobile device, merchants can securely capture payments via manual entry, EMV, encrypted card swipe, or contactless (NFC) and text or email receipts with signatures.

### Accept Payments Anywhere

Take payments wherever your customers are!

PayWithIt is perfect for:

- ✓ In-home service providers
- ✓ Fundraising events
- ✓ Catering
- ✓ Transit
- ✓ Trade shows
- ✓ And many other businesses

Fully customizable, you can set up PayWithIt to work best with your business and customers. You can not only run sale transactions, but also issue voids, refunds, credits, as well as view transaction logs all within the app without having to log into another system. In addition, modify billing information fields. You can even create custom fields to collect data unique to your business to streamline operations.

PayWithIt is a free download from your device's App Store.

### Protect Payments

When accepting payments, reconciling transactions, or viewing reports, card holder data remains protected at all times with PayWithIt.

Supported devices encrypt card holder data upon entry. Sensitive card data is turned into non-accessible data reducing vulnerability to skimming.

If your device is lost or stolen, don't worry. Full card holder data is not stored on the device. You can always rely on the web-based TC Vault as a central resource for your transaction history.
